Dear Friend of Agriculture:

As the state's second largest industry, agriculture is a strong economic force in Michigan. In fact, according to a recent report, agriculture accounts for \$60 billion in total economic activity (direct and indirect) and 1 million jobs in Michigan. I want to share with you some of our efforts in the Michigan Senate to help drive the continued economic growth and development of this vital industry.

Agriculture is also an important part of the quality of life in the 36th Senate District, and I will continue to work hard on behalf of the agricultural community. If there is any way I may be of assistance to you, please do not hesitate to contact me toll-free at 866-305-2136 or visit my website at www.SenatorTonyStamas.com.

Best wishes for a productive and prosperous season!

Sincerely,

Tony Stamas State Senator

36th District

## **2002 CENSUS OF AGRICULTURE**

36th District Profile

Number of farms:.....**2,768** Market Value of Production: \$95,563,000

Top Livestock Inventory Items: .....cattle and calves hogs and pigs

Top Crop Items: .....forage corn for grain

## SENATOR STAMAS SUPPORTS RENEWABLE FUELS PACKAGE

Approximately 1.9 million

acres of corn is harvested

annually in Michigan.

Our agricultural economy will get a lift from new laws designed to increase the use of alternative energy in Michigan. Senate Republicans spearheaded the effort to encourage the development and use of renewable fuels

like ethanol and biodiesel. The measures establish a wide range of tax incentives along with a provision to create new renaissance zones for the manufacture of alternative energy.

Ethanol is a clean-burning, high-octane fuel primarily produced from corn. Biodiesel is a cleaner burning diesel fuel

made from natural products like soybean oil. Corn and soybeans are among Michigan's top commodities.

Approximately 1.9 million acres of corn is harvested annually in Michigan.

Three ethanol plants are currently up and running in

Albion, Lake Odessa and Caro; plants in Marysville and Riga Township are under construction. Other plants are also under discussion.

I wholeheartedly supported the plan to encourage development or renewable fuels in Michigan. As the center of auto-

motive technology and a leader in agricultural research, I believe Michigan is well positioned to take the lead and capitalize on renewable energy fuels and technologies.

# Value-Added Agriculture Receives a Boost

he agriculture industry will have greater access to money in the 21st Century Jobs Fund under Senate legislation signed into law. The new laws help promote value-added opportunities.

A new requirement calls for the Department of Agriculture to hold a commercialization roundtable to promote agricultural innovation and ways to infuse capital into value- added ventures. Another measure expands the Agriculture

Development Fund to a grant and loan program instead of grant only to help more businesses launch new products or expand.

Examples of value-added agriculture include agri-tourism, direct farm marketing, food processing, or producing specialty products. Michigan produces over 125 raw commodities, second in diversity only to California. Michigan's diversity increases tenfold by taking those raw commodities and adding value to them through further processing and marketing.

#### SENATE ENCOURAGES AG FACILITY EXPANSION

A griculture is the state's second leading industry and one of the lifelines for Michigan's economic vitality. Senate legislation I supported to help our agricultural industry grow and create jobs has now been signed into law. Public Act 284 of 2006 creates ten new agriculture processing renaissance zones in Michigan. Facilities in these areas are exempt from all state and local taxes for up to 15 years.

Under the new law, the state must look at these considerations when awarding an agriculture processing renaissance zone:

- Economic impact on local suppliers
- Creation of jobs
- Viability of the project
- Economic impact on the community

In addition, at least half of the new renaissance zones must be located in rural areas.

This new law will open the door for more agriculture facilities to expand their processing operations and help farmers stay competitive. Find out more information on renaissance zones at <a href="https://www.michigan.org/medc/services/sitedevelopment/renzone/">www.michigan.org/medc/services/sitedevelopment/renzone/</a>.

# SENATOR STAMAS SUPPORTS ASSISTANCE TO FARMERS

#### New Law Promotes Efficiency and Environmental Stewardship

A Senate bill signed into law provides assistance to farmers and food processors to help make operations cleaner and more efficient, and generate renewable energy. Under Public Act 254 of 2006, eligible farmers can obtain loans of up to \$200,000 to build agricultural energy production systems, which often have high start-up costs and can run as much as \$2 million.

Methane digesters, one of the most common types of the systems, process animal waste using treatment technology that yields methane gas, and at the same time reduces the volume of solids and liquids. Harmful pathogens are neutralized and odors are eliminated. Other systems covered by the new law include biomasss gasification and thermal depolymerization.

The energy produced can be used to generate electricity for the farm operation, or it can be sold on the energy market.

Senate Republicans worked tirelessly with industry groups to bring this legislation to fruition. You can find information on the loan program at <a href="https://www.michigan.gov/deq">www.michigan.gov/deq</a>. Click on "Pollution Prevention" on the left sidebar to access the Small Business Pollution Prevention Loan Program.

# MICHIGAN EXPORTS

The MDA International and New Market Development Program provides services that help Michigan food and agricultural firms initiate or expand their international and domestic markets. Visit the website at <a href="https://www.michigan.gov/mda">www.michigan.gov/mda</a> to access a wealth of resources, including trade leads and trade show information. Click on Michigan Marketplace on the left sidebar.

# Michigan's Top Five Agricultural Exports 2005:

Soybeans and products — \$222 million
Feed grains and products — \$163 million
Vegetables — \$152 million
Dairy products — \$66 million
Wheat and products — \$60 million

USDA, Foreign Agricultural Service, August 2006

#### Agricultural Tourism Report Available

Agricultural tourism is growing as a source of income for many family farms and a way to preserve farmland. The Michigan Agricultural Tourism Advisory Commission recently issued a final report with recommendations to help support and promote this important industry. You can view the report along with a local zoning guidebook online at <a href="https://www.michigan.gov/mda">www.michigan.gov/mda</a>.

The commission was created by legislation in 2005 with a primary purpose to study the impact of local zoning. The group was also charged with looking at ways farmers can expand agriculture tourism opportunities. The Michigan Department of Agriculture estimates that there are well over 2,000 such businesses in the state.

## Mandatory Cattle ID Program In Effect

Electronic identification ear tags are now mandatory statewide for movement of cattle from farms effective March 1, 2007. Cattle must be tagged if they are leaving the farm to be sold or changing ownership. For more information, or to check for updates on the program, go to <a href="https://www.michigan.gov/mda">www.michigan.gov/mda</a> or <a href="https://www.michigananimalid.com">www.michigananimalid.com</a>.
